

## Homework 1

Due: 9/14

In this course, we will use MySQL database to practice SQL and you will also use it for the class project. So, you need to install MySQL on your computer.

This assignment is an installation of MySQL database.

First, install MySQL on your computer using the installation instruction that is appropriate for your OS.

Next, create and populate the *company* database using the instruction in the *create-populate-company-database.doc* (*create-populate-company-database.pdf*) file. Capture the last screen and include the screenshot in your submission file.

Name your submission file *LastName\_FirstName\_Hw1.doc* or *LastName\_FirstName\_Hw1.pdf*.

**If you want to use a different DBMS (such as Oracle, SQL Server, or PostgreSQL):**

It is your responsibility to install and use the DBMS you chose. For homework 1, you must create the *company* database on your DBMS, capture the required screenshot, and include it in your submission file as described above.
